

Sasai Payment Gateway.

Business is agile by nature and so has to technology. We re-imagined the payment experience and built a seamless, secure and reliable payment stack called Sasai Payment Gateway (SPG).

Sasai Payment Gateway (SPG) is a payment orchestrator & integration gateway for merchants to collect payment from their customers.

SPG offers below main capabilities.

SasaiFintech

Product Offering

Checkout

A checkout page with multiple payment options.

API

Open API for integration

Subscriptions

Auto debit for services on scheduled frequency.

Payment Links

Collect payments by sending customers Payment Links via email and SMS.

QR Codes

Use QR Codes to receive payments from your customers.

Invoices

Use Invoices to create, issue and track invoices. Once an invoice is issued, the customer can make the payment.

Save instrument for easy checkout

Catalog & Fulfillment

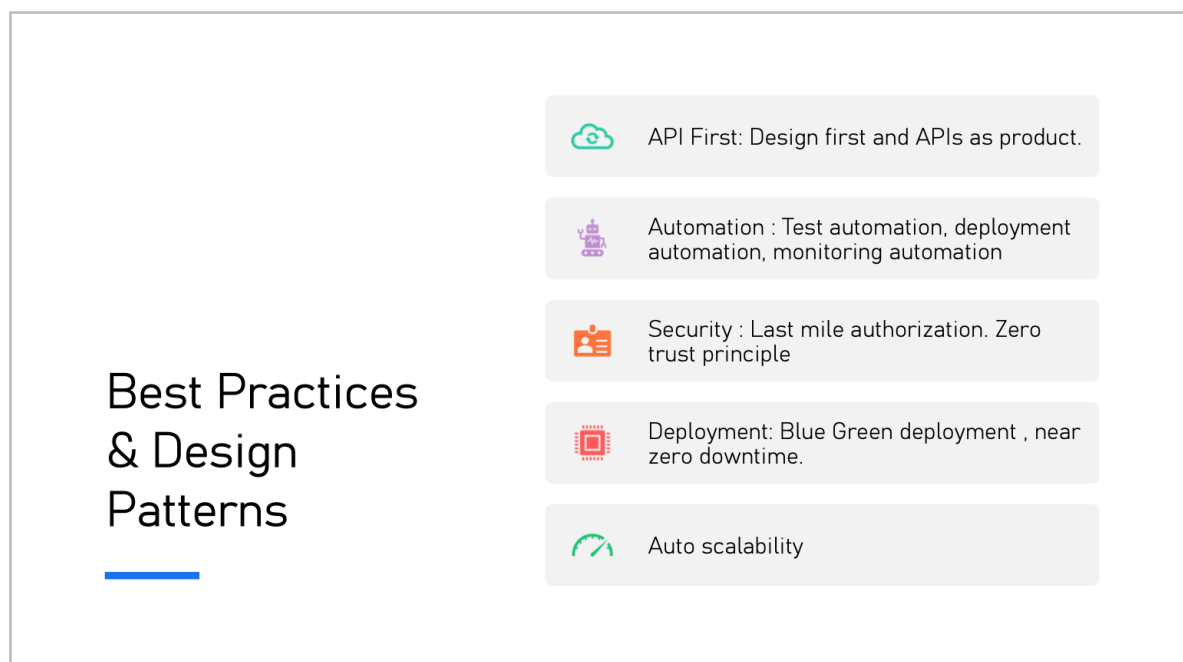

Use catalog to create unified recharge and bill payment journey.

We have extensive roadmap to build SPG as one stop for all business users need including accept payment, manage business, and tools to grow business.

Technology:

SPG is build natively for cloud , designed as multi-tenant architecture with security first approach. Its Open API allows customers to fully control user experience.

Business Model:

SPG is a strategic direction for Sasai to leverage internal Sasai assets and offer

a white label solution to customers. It is build as Software as a Service. This makes easy for customers to take advantage of fully managed service and quick time to market to launch. We are targeting banks and financial institutions to have white label payment gateway capabilities to give best payment experience to their customer base.
